Workrite[®]
FIRE SERVICE

THE FUTURE OF PROTECTION IS FR.

Firefighters deserve a uniform that puts forward the same level of dedication as they do. That's why Workrite[®] Fire Service delivers protection without compromise. Our station wear garments offer an added layer of NFPA[®] 1975 compliant, flame-resistant (FR) protection with features that go beyond providing comfort to ensuring confidence. We are Workrite, the recognized leader in FR station wear. Now powered by Bulwark[®] Protection, we offer over 300 years of combined experience in FR and exclusive access to the most extensive FR education and training in the industry. The next generation of protection starts now.

WASH CODES

Do not use bleach, hydrogen peroxide, starch or fabric softeners on any Workrite garments. Please visit Workrite.com for complete laundry instructions.

HW HOME WASH:
A laundering process normally defined as washing in a residential type top- or front-loading unit followed by tumble drying. Detergents used in this process are formulated for home use and are readily available on the consumer market. Refer to garment label for specific care instructions.

IL-LS INDUSTRIAL LAUNDER - LIGHT SOIL:
This less aggressive (industrial) laundering process is commonly used on uniforms which are lightly soiled or made of fabrics that are not designed to withstand higher wash temperatures or harsher chemistry. In a typical light soil formula, water temperatures are usually held to a maximum of 140° F and pH to 10.5 max.

CLASSIFIED UL NFPA® 2112 COMPLIANT
Workrite Fire Service apparel offers flame-resistant protective garments that are certified by Underwriters Laboratories to meet the requirements of NFPA 2112 – Standard on Flame-Resistant Clothing for Protection of Industrial Personnel Against Short-Duration Thermal Exposures from Fire, 2018 Edition. NFPA 2113 – Standard on Selection, Care, Use, and Maintenance of Flame-Resistant Garments for Protection of Industrial Personnel Against Short-Duration Thermal Exposures from Fire, 2015 Edition, requires that garments cover the upper and lower body and flammable underlayers as completely as possible. Bulwark garments meet this requirement either as a single garment such as a coverall or when worn with another certified garment such as a shirt or pants to provide both upper and lower body coverage.

THE IMPORTANCE OF FLAME-RESISTANT (FR) STATION WEAR

For many industries, flame-resistant (FR) clothing has been widely adopted as a means of protecting employees from burn injury or even death. However, while the fire service community takes firefighter safety very seriously, it's estimated that only a quarter of fire departments require flame-resistant station wear. Instead, the majority are wearing either cotton or synthetic uniforms underneath their turnout gear. FR station wear should be considered an integral part of every firefighter's personal protective equipment (PPE) – clothing designed to be worn continuously in designated locations where intermittent exposure to radiant heat and flame is possible.

I ALREADY WEAR TURNOUT GEAR, WHY DO I ALSO NEED FR STATION WEAR?

The proper selection of PPE is very important, and it doesn't stop at your turnout gear. A systems approach: building your PPE from the inside out, is essential in maximizing fire fighter safety. Station wear and the material from which it is made has the potential to contribute to fire fighter burn injury.

Ultimately, under today's conditions, firefighters fight fires about 10% of the time. The other 90% of the time they're called on for non-fire hazards and technical rescue responsibilities, including roadway incidents, vehicle extrication, medical emergencies, hazmat, urban search and rescue, high/low angle rescue, swiftwater rescue and flood rescue. For many of these responses, typical structural PPE is not utilized or may be doffed mid-operation. However, the threat of an accidental thermal incident may still exist, making FR station wear a critical layer of protection for firefighter safety.

CHOOSING THE RIGHT STATION WEAR

COTTON

Unlike FR fabrics, cotton, although acceptable under NFPA® 1975, is a fuel and can ignite if exposed to an ignition source, ultimately contributing to firefighter burn injury.

SYNTHETICS

Although synthetic or synthetic blend fabrics are not compliant with NFPA® 1975, for many fire departments uniforms made from synthetic fabrics are still the station wear fabrics of choice. Unlike FR fabrics, synthetics easily melt, drip and can unnecessarily add to firefighter injury.

FLAME-RESISTANT CLOTHING IS:

- Engineered to self-extinguish upon removal of the ignition source.
- Made from natural or synthetic fabrics, like other clothing.
- Designed to limit (not eliminate) burn injury.
- Made to provide an additional layer of protection when incorporated with primary PPE and a minimal layer of protection when worn as the outermost layer.
